

CERTIFICATE OF ANALYSIS

Product Features

	CAS No.	17557-76-5
	Product name	4,4'-Diamino-[1,1'-biphenyl]-2,2'- dicarboxylic acid
	Abbreviation	2,2'-DCB
	Appearance	White powder
	Purity(HPLC)	≥99%
	Molecular formula	C ₁₄ H ₁₂ N ₂ O ₄
	Molecular weight	272.26
	Package	In Aluminum foil bag, cartons outside.
	Storage	Preserve in a well-closed container and keep in cool, dry place, avoid light.

4,4'-Diamino-[1,1'-biphenyl]-2,2'- dicarboxylic acid (abbreviated 2,2'-DCB) is an organic compound. It is slightly soluble in water, but soluble in organic solvents such as alcohols, ethers and ketones. It is stable at room temperature, but decomposes at high temperatures, in the presence of light and oxidizing agents.

Application

- Polyester fiber manufacturing: 4,4'-Diamino-[1,1'-biphenyl]-2,2'- dicarboxylic acid is an important raw material of polyterephthalic acid, used in the manufacture of polyester fibers, such as polyester thread, polyester fabrics and so on.
- Polyester resin production: 4,4'-Diamino-[1,1'-biphenyl]-2,2'- dicarboxylic acid and ethylene glycol reaction can produce polyester resin, used in the manufacture of plastic bottles, plastic film and so on.
- Dye synthesis: It can be used to synthesize certain organic dyes, widely used in textile, printing and other industries.

Company Profile

- Heynova (Shanghai) New Material Technology co., Ltd. located in Shanghai is a technologically innovative company with integrated development of R&D, production and sales of high-end Electronic Materials and Specialty Polymer Materials. Meanwhile we are the agent of PI Resin, PI Engineering Plastics and 3D Printing materials.
- **As technology R&D**, the company has maintained close cooperation with a number of domestic research institutes for a long time, focusing on the design of the molecular structure of electronic materials, with a number of invention patents, the core formulations and processes independently controllable, with the ability to customize the development of the materials.
- **As production and supply**, our company has cooperative production bases in Shandong, Jiangsu, Sichuan and Northeast China, which can produce materials from gram to tonnage level, and has all the capabilities of small, medium and large-scale production.

Business Classification

- **Polyimide Materials:** Including PI Monomers, PI Resin, PI Engineering Plastics. PI monomers are mainly Dianhydride and Diamine special monomers, which have been widely used in the production of colorless and transparent Flexible Polyimide Films, Flexible Display Materials, 5G New Materials, Photosensitive Polyimide and Semiconductor Materials, New Energy Automobile Special Insulating Materials, Aerospace Composites, and many other high-tech field products.
- **Photoresist Materials:** Including Photoresist monomer, PAG, PAC, Photoinitiators, Solvents and so on. At present, our company's Photoresist Monomer is mainly based on KrF, ArF Gel monomer, focusing on the provision of Display Photoresist, Semiconductor Photoresist and special Photoresist materials for Semiconductors, Panels, PCB and other fields.
- **OLED Display Materials:** Specialized in providing OLED Display Intermediate materials for cell phones, TVs, flat panels, wearable devices, in-vehicle devices and other fields.
- **Lithium Battery Materials:** Specialized in providing Lithium Battery Diaphragm materials for transportation, electric power storage, mobile communication, new energy storage, aerospace military and other fields.
- **3D Printing Materials:** Specialized in providing 3D Printing Organic Resin materials and high-end Metal materials for aerospace, marine, nuclear industry, medical and other fields.
- **Customized services:** We can customize the development of products according to customer needs, and continuously optimize the material properties and key indicators, developed in collaboration with customers, established the direct channel of "R & D - Validation - Mass production".
