

CERTIFICATE OF ANALYSIS

Product Features

	CAS No.	89-32-7
	Product name	Pyromellitic Dianhydride
	Abbreviation	PMDA
	Appearance	Light yellow to white powder
	Purity(HPLC)	≥99%
	Molecular formula	C ₁₀ H ₂ O ₆
	Molecular weight	218.12
	Package	In Aluminum foil bag, cartons outside.
	Storage	Preserve in a well-closed container and keep in cool, dry place, avoid light.

Application

- Pyromellitic dianhydride (abbreviated as PMDA), with its special molecular structure, can be used in the manufacture of heat-resistant, electrically insulating and chemical-resistant materials. It is mainly synthesized as dianhydride monomer with aromatic diamine to produce polyimide plastics. Due to its excellent ultra-high heat resistance, acid and alkali resistance, excellent mechanical properties, electrical properties and dimensional stability, polyimide is widely used in high-tech fields such as aviation, aerospace, microelectronics and atomic energy, which have stringent requirements on material properties. However, the purity of pyromellitic dianhydride is very high and needs to be more than 99%.
- Pyromellitic dianhydride is not only an important raw material for organic synthesis industry, but also a basic raw material for the development of new chemical materials and high value-added fine chemical products, but also used as a curing agent for epoxy resin and cross-linking agent for polyester resin, and used in the manufacture of phthalocyanine blue dyestuffs and some important derivatives, which have a wide range of uses.

Heynova (Shanghai) New Material Technology CO., Ltd

Company Profile

- Heynova (Shanghai) New Material Technology co., Ltd. located in Shanghai is a technologically innovative company with integrated development of R&D, production and sales of high-end Electronic Materials and Specialty Polymer Materials. Meanwhile we are the agent of PI Resin, PI Engineering Plastics and 3D Printing materials.
- **As technology R&D**, the company has maintained close cooperation with a number of domestic research institutes for a long time, focusing on the design of the molecular structure of electronic materials, with a number of invention patents, the core formulations and processes independently controllable, with the ability to customize the development of the materials.
- **As production and supply**, our company has cooperative production bases in Shandong, Jiangsu, Sichuan and Northeast China, which can produce materials from gram to tonnage level, and has all the capabilities of small, medium and large-scale production.

Business Classification

- **Polyimide Materials:** Including PI Monomers, PI Resin, PI Engineering Plastics. PI monomers are mainly Dianhydride and Diamine special monomers, which have been widely used in the production of colorless and transparent Flexible Polyimide Films, Flexible Display Materials, 5G New Materials, Photosensitive Polyimide and Semiconductor Materials, New Energy Automobile Special Insulating Materials, Aerospace Composites, and many other high-tech field products.
- **Photoresist Materials:** Including Photoresist monomer, PAG, PAC, Photoinitiators, Solvents and so on. At present, our company's Photoresist Monomer is mainly based on KrF, ArF Gel monomer, focusing on the provision of Display Photoresist, Semiconductor Photoresist and special Photoresist materials for Semiconductors, Panels, PCB and other fields.
- **OLED Display Materials:** Specialized in providing OLED Display Intermediate materials for cell phones, TVs, flat panels, wearable devices, in-vehicle devices and other fields.
- **Lithium Battery Materials:** Specialized in providing Lithium Battery Diaphragm materials for transportation, electric power storage, mobile communication, new energy storage, aerospace military and other fields.
- **3D Printing Materials:** Specialized in providing 3D Printing Organic Resin materials and high-end Metal materials for aerospace, marine, nuclear industry, medical and other fields.
- **Customized services:** We can customize the development of products according to customer needs, and continuously optimize the material properties and key indicators, developed in collaboration with customers, established the direct channel of "R & D - Validation - Mass production".
