

CERTIFICATE OF ANALYSIS

Product Features

	CAS No.	108-11-2
	Product name	4-Methyl-2-pentanol
	Abbreviation	MIBC
	Appearance	Colorless transparent liquid
	Purity(HPLC)	≥99%
	Molecular formula	C ₆ H ₁₄ O
	Molecular weight	102.17
	Package	In fluoride bottle/fluoride drums/plastic drums/IBC Tank, etc.
	Storage	Preserve in a well-closed container and keep in cool, dry place, avoid light.

Application

- 4-Methyl-2-pentanol is an excellent medium boiling point solvent. Mainly used as a solvent for dyestuffs, petroleum, rubber, resin, paraffin, nitrocellulose and ethyl cellulose, etc. Used as an inert solvent for nitrocellulose lacquers, which can increase the gloss and flatness of the paint and improve the reddening performance; used as a solvent in the manufacture of lubricant additives. Used as raw material for organic synthesis, mineral flotation detergent, such as extraction of silica and copper sulfate ore; also used in brake fluid.
- 4-Methyl-2-pentanol is also an excellent foaming agent for non-ferrous metals and non-metallic ores. It is mainly used as a foaming agent for the separation of non-ferrous oxidized ores or fine-grained sulphide ores with high mud content. It is widely used in the beneficiation of lead-zinc, copper-molybdenum and copper-gold ores all over the world, and is particularly effective in improving the quality of concentrates.

Company Profile

- Heynova (Shanghai) New Material Technology co., Ltd. located in Shanghai is a technologically innovative company with integrated development of R&D, production and sales of high-end Electronic Materials and Specialty Polymer Materials. Meanwhile we are the agent of PI Resin, PI Engineering Plastics and 3D Printing materials.
- **As technology R&D**, the company has maintained close cooperation with a number of domestic research institutes for a long time, focusing on the design of the molecular structure of electronic materials, with a number of invention patents, the core formulations and processes independently controllable, with the ability to customize the development of the materials.
- **As production and supply**, our company has cooperative production bases in Shandong, Jiangsu, Sichuan and Northeast China, which can produce materials from gram to tonnage level, and has all the capabilities of small, medium and large-scale production.

Business Classification

- **Polyimide Materials:** Including PI Monomers, PI Resin, PI Engineering Plastics. PI monomers are mainly Dianhydride and Diamine special monomers, which have been widely used in the production of colorless and transparent Flexible Polyimide Films, Flexible Display Materials, 5G New Materials, Photosensitive Polyimide and Semiconductor Materials, New Energy Automobile Special Insulating Materials, Aerospace Composites, and many other high-tech field products.
- **Photoresist Materials:** Including Photoresist monomer, PAG, PAC, Photoinitiators, Solvents and so on. At present, our company's Photoresist Monomer is mainly based on KrF, ArF Gel monomer, focusing on the provision of Display Photoresist, Semiconductor Photoresist and special Photoresist materials for Semiconductors, Panels, PCB and other fields.
- **OLED Display Materials:** Specialized in providing OLED Display Intermediate materials for cell phones, TVs, flat panels, wearable devices, in-vehicle devices and other fields.
- **Lithium Battery Materials:** Specialized in providing Lithium Battery Diaphragm materials for transportation, electric power storage, mobile communication, new energy storage, aerospace military and other fields.
- **3D Printing Materials:** Specialized in providing 3D Printing Organic Resin materials and high-end Metal materials for aerospace, marine, nuclear industry, medical and other fields.
- **Customized services:** We can customize the development of products according to customer needs, and continuously optimize the material properties and key indicators, developed in collaboration with customers, established the direct channel of "R & D - Validation - Mass production".
