

CERTIFICATE OF ANALYSIS

Product Features

	CAS No.	249562-06-9
	Product name	2-Methyl-2-adamantyl acrylate
	Abbreviation	MAA
	Appearance	Colorless to light yellow transparent liquid
	Purity(HPLC)	≥99%
	Metal ion content	≤100 ppb each
	Molecular formula	C ₁₄ H ₂₀ O ₂
	Molecular weight	220.31
	Package	In fluoride bottle/fluoride drums/plastic drums/IBC Tank, etc.
	Storage	Preserve in a well-closed container and keep in refrigerated environment.

2-Methyl-2-adamantyl acrylate is a colorless to light yellow transparent liquid and usually has an irritating odor. It has a density of 0.891 g/cm³. 2-Methyl-2-adamantyl acrylate is soluble in alcohols, ethers and aromatic hydrocarbons and insoluble in water.

Application

- 2-Methyl-2-adamantyl acrylate is an important monomer widely used in the synthesis of polymethylmethacrylate (PMMA), i.e., organic glass. PMMA has excellent transparency, weather resistance and mechanical strength, and is widely used in optical lenses, building materials, automotive lighting, decorative materials and other fields.
- 2-Methyl-2-adamantyl acrylate can also be used to synthesize polymer emulsions, such as for coatings, adhesives and textile processing aids.

Company Profile

- Heynova (Shanghai) New Material Technology co., Ltd. located in Shanghai is a technologically innovative company with integrated development of R&D, production and sales of high-end Electronic Materials and Specialty Polymer Materials. Meanwhile we are the agent of PI Resin, PI Engineering Plastics and 3D Printing materials.
- **As technology R&D**, the company has maintained close cooperation with a number of domestic research institutes for a long time, focusing on the design of the molecular structure of electronic materials, with a number of invention patents, the core formulations and processes independently controllable, with the ability to customize the development of the materials.
- **As production and supply**, our company has cooperative production bases in Shandong, Jiangsu, Sichuan and Northeast China, which can produce materials from gram to tonnage level, and has all the capabilities of small, medium and large-scale production.

Business Classification

- **Polyimide Materials:** Including PI Monomers, PI Resin, PI Engineering Plastics. PI monomers are mainly Dianhydride and Diamine special monomers, which have been widely used in the production of colorless and transparent Flexible Polyimide Films, Flexible Display Materials, 5G New Materials, Photosensitive Polyimide and Semiconductor Materials, New Energy Automobile Special Insulating Materials, Aerospace Composites, and many other high-tech field products.
- **Photoresist Materials:** Including Photoresist monomer, PAG, PAC, Photoinitiators, Solvents and so on. At present, our company's Photoresist Monomer is mainly based on KrF, ArF Gel monomer, focusing on the provision of Display Photoresist, Semiconductor Photoresist and special Photoresist materials for Semiconductors, Panels, PCB and other fields.
- **OLED Display Materials:** Specialized in providing OLED Display Intermediate materials for cell phones, TVs, flat panels, wearable devices, in-vehicle devices and other fields.
- **Lithium Battery Materials:** Specialized in providing Lithium Battery Diaphragm materials for transportation, electric power storage, mobile communication, new energy storage, aerospace military and other fields.
- **3D Printing Materials:** Specialized in providing 3D Printing Organic Resin materials and high-end Metal materials for aerospace, marine, nuclear industry, medical and other fields.
- **Customized services:** We can customize the development of products according to customer needs, and continuously optimize the material properties and key indicators, developed in collaboration with customers, established the direct channel of "R & D - Validation - Mass production".
