

CERTIFICATE OF ANALYSIS

Product Features

	CAS No.	25067-05-4
	Product name	Poly(glycidyl methacrylate)
	Abbreviation	PGMA-3900
	Appearance	Colorless transparent solid
	Purity(HPLC)	≥99%
	Molecular formula	C ₇ H ₁₀ O ₃
	Molecular weight	142.15
	Package	In Aluminum foil bag, cartons outside.
	Storage	Preserve in a well-closed container and keep in cool, dry place, avoid light.

Poly(glycidyl methacrylate) is a colorless, odorless, transparent, hard and good thermoplastic solid. It has good weather resistance, chemical stability and electrical insulation. It is highly stable to light and ultraviolet rays, and is not susceptible to yellowing and aging. Poly(glycidyl methacrylate) has high mechanical strength, with good tensile and impact strength. It has a high glass transition temperature, usually above 100°C. The polymer has good transparency, high transmittance and low dispersion relative to glass.

Application

- Plastic products: Its good transparency and mechanical properties are often used to make optical lenses, eyeglasses, plastic bottles, signs, toys and other plastic products.
- Building materials: the polymer can be made into building materials with good weather resistance, such as heat-insulating panels and roofing materials.
- Medical Devices: With its good biocompatibility, poly(glycidyl methacrylate) can be used to make medical devices, artificial organs and other medical equipment.
- Special industrial applications: the polymer can also be used in fiber optics, optical instruments, electronic devices and other special industrial fields.

Company Profile

- Heynova (Shanghai) New Material Technology co., Ltd. located in Shanghai is a technologically innovative company with integrated development of R&D, production and sales of high-end Electronic Materials and Specialty Polymer Materials. Meanwhile we are the agent of PI Resin, PI Engineering Plastics and 3D Printing materials.
- **As technology R&D**, the company has maintained close cooperation with a number of domestic research institutes for a long time, focusing on the design of the molecular structure of electronic materials, with a number of invention patents, the core formulations and processes independently controllable, with the ability to customize the development of the materials.
- **As production and supply**, our company has cooperative production bases in Shandong, Jiangsu, Sichuan and Northeast China, which can produce materials from gram to tonnage level, and has all the capabilities of small, medium and large-scale production.

Business Classification

- **Polyimide Materials:** Including PI Monomers, PI Resin, PI Engineering Plastics. PI monomers are mainly Dianhydride and Diamine special monomers, which have been widely used in the production of colorless and transparent Flexible Polyimide Films, Flexible Display Materials, 5G New Materials, Photosensitive Polyimide and Semiconductor Materials, New Energy Automobile Special Insulating Materials, Aerospace Composites, and many other high-tech field products.
- **Photoresist Materials:** Including Photoresist monomer, PAG, PAC, Photoinitiators, Solvents and so on. At present, our company's Photoresist Monomer is mainly based on KrF, ArF Gel monomer, focusing on the provision of Display Photoresist, Semiconductor Photoresist and special Photoresist materials for Semiconductors, Panels, PCB and other fields.
- **OLED Display Materials:** Specialized in providing OLED Display Intermediate materials for cell phones, TVs, flat panels, wearable devices, in-vehicle devices and other fields.
- **Lithium Battery Materials:** Specialized in providing Lithium Battery Diaphragm materials for transportation, electric power storage, mobile communication, new energy storage, aerospace military and other fields.
- **3D Printing Materials:** Specialized in providing 3D Printing Organic Resin materials and high-end Metal materials for aerospace, marine, nuclear industry, medical and other fields.
- **Customized services:** We can customize the development of products according to customer needs, and continuously optimize the material properties and key indicators, developed in collaboration with customers, established the direct channel of "R & D - Validation - Mass production".
