CERTIFICATE OF ANALYSIS

Product Features

	CAS No.	537-65-5
	Product name	4,4'-Iminodianiline
	Abbreviation	NDA
	Appearance	Colorless crystalline solid
	Purity(HPLC)	≥99%
	Molecular formula	C ₁₂ H ₁₃ N ₃
	Molecular weight	199.25
	Package	In Aluminum foil bag, cartons outside.
	Storage	Preserve in a well-closed container and keep in cool, dry place, avoid light.

4,4'-Iminodianiline, also known as NDA, is an organic compound appearing as a colorless crystalline solid. It is soluble in many organic solvents such as ethanol, chloroform, and dichloromethane, but exhibits low solubility in water. Under normal conditions, 4,4'-Iminodianiline is relatively stable but undergoes oxidation reactions in the presence of strong oxidizing agents. As a compound containing an active amino group, it can react with certain acidic substances and carboxylic acid compounds to form corresponding salts or amides.

Application

- 4,4'-Iminodianiline serves as a crucial organic synthesis intermediate, extensively utilized in the preparation of dyes, pigments, and chemical fluorescent agents. It also functions as a raw material for electronic materials and optoelectronic devices.

Company Profile

- Heynova (Shanghai) New Material Technology co., Ltd. located in Shanghai is a technologically innovative company with integrated development of R&D, production and sales of high-end Electronic Materials and Specialty Polymer Materials. Meanwhile we are the agent of PI Resin, PI Engineering Plastics and 3D Printing materials.
- **As technology R&D**, the company has maintained close cooperation with a number of domestic research institutes for a long time, focusing on the design of the molecular structure of electronic materials, with a number of invention patents, the core formulations and processes independently controllable, with the ability to customize the development of the materials.
- **As production and supply**, our company has cooperative production bases in Shandong, Jiangsu, Sichuan and Northeast China, which can produce materials from gram to tonnage level, and has all the capabilities of small, medium and large-scale production.

Business Classification

- **Polyimide Materials:** Including PI Monomers, PI Resin, PI Engineering Plastics. PI monomers are mainly Dianhydride and Diamine special monomers, which have been widely used in the production of colorless and transparent Flexible Polyimide Films, Flexible Display Materials, 5G New Materials, Photosensitive Polyimide and Semiconductor Materials, New Energy Automobile Special Insulating Materials, Aerospace Composites, and many other high-tech field products.
- **Photoresist Materials:** Including Photoresist monomer, PAG, PAC, Photoinitiators, Solvents and so on. At present, our company's Photoresist Monomer is mainly based on KrF, ArF Gel monomer, focusing on the provision of Display Photoresist, Semiconductor Photoresist and special Photoresist materials for Semiconductors, Panels, PCB and other fields.
- **OLED Display Materials:** Specialized in providing OLED Display Intermediate materials for cell phones, TVs, flat panels, wearable devices, in-vehicle devices and other fields.
- **Lithium Battery Materials:** Specialized in providing Lithium Battery Diaphragm materials for transportation, electric power storage, mobile communication, new energy storage, aerospace military and other fields.
- **3D Printing Materials:** Specialized in providing 3D Printing Organic Resin materials and high-end Metal materials for aerospace, marine, nuclear industry, medical and other fields.
- **Customized services:** We can customize the development of products according to customer needs, and continuously optimize the material properties and key indicators, developed in collaboration with customers, established the direct channel of "R & D - Validation - Mass production".
